

## **Disclaimer**

### **Towing a converted car as a towcar to be flat towed behind a motorhome with an automatic gearbox.**

We do not endorse flat towing (four wheels on the ground) of cars with an automatic gearbox.

We do understand that it is desirable for some customers to use an automatic vehicle as their towcar.

For that reason we have contacted manufacturers of the cars we currently adapt.

Some vehicles have been confirmed as suitable to be flat towed. Vehicles that have had this confirmation are the only vehicles with automatic gearboxes that we will adapt as towcars.

However, confirmation of being suitable to be flat towed does not necessarily mean that it is suitable to be flat towed for prolonged periods, at high speeds or for long distances.

For this reason any converted automatic vehicle is done on the basis that LNB Towbars & Vehicle Extras Limited, LNB Leisure Equipment Limited, Roadmaster Inc, and any of our fitting centres are not liable for any consequential gearbox or associated damage as a result of flat towing, and that the customer understands and bears this responsibility.

Our recommendation is that if an automatic gearbox is not necessary for the user, then a manual gearbox would be preferable for the towcar.
